Gotham offers a wide selection of authorized learning courses from leading vendors. The training is offered via Remote-Live, ILT, e-Learning and on-site. Each course is designed to provide the highest quality training using the latest product releases.

Practice Overview

Virtualization		Traditional resources like servers, desktops, and applications can be virtualized, changing the way IT does business. Virtualization technologies yield better business process support and cost savings through consolidation, standardization, and automated provisioning.
Infrastructure		Engineers architect and implement systems to gain operational efficiency through optimization, implementation of administrative controls, tighter integration of core business applications, and seamless access to resources for a distributed workforce.
Security		Our Security Practice works with customers on policy development and enforcement solutions to meet compliance objectives through pre-audit assessments or post-audit remediation, data protection solutions, risk management, security frameworks, threat and attack detection, and implementation of technologies to enforce the policies.
Storage		In today's centralized and virtualized environments, robust and resilient storage infrastructures are critical to an organization's success. Gotham delivers solutions that address these needs as well as backup and recovery solutions to ensure critical data is always available.
Application Development		Whether it's a collaboration and workflow system, a new interface to an existing business system, or a complete application architecture and development effort, Gotham provides customized solutions with a focus on functionality and stability.
Support Services		Gotham's Technical Education Center, located in our Montvale, NJ office, provides vendor-certified training courses, as well as custom and on-site training. Gotham provides technical support within our core technology practices and areas of expertise, helping customers with troubleshooting and issues such as network outages and degradation of service.
Technical Staff Augmentation		Gotham's staffing team places project teams, consultants for short term projects, and temporary-to-permanent or permanent staff in both contingency and retainer assignments.
