

When the unexpected happens...

Gotham is here to help keep a difficult situation from becoming a crisis.

Our experience designing and implementing secure remote access solutions—for organizations of all sizes, in all industries—is unmatched.

When unexpected circumstances occur, you need resources you can rely on to respond quickly and help keep your business running until things return to normal. We can enable you to provide your work force with secure remote access to Windows desktops in a fully managed environment.

These are just some of the services we can provide to quickly get your work force up and running remotely:

- Extend existing Citrix environments, on-premises or in the cloud
- Stand up Windows 10 environments, on-premises or in the cloud
- Provide burst Citrix licensing for short term use

Our monitoring, support, and remote administration services will help keep your remote work force operating smoothly.

- **GothamWatch:** 24/7 monitoring of servers, networking, and storage devices. Includes automated alerts and level-2 help desk support.
- **RemoteAdmin for Citrix Virtual Apps & Desktops, VMware Horizon View and Microsoft WVD and NetScaler/F5 ADC:** Fully managed secure endpoint experience for remote users, including all image and security updates.

Flexible contract terms are available for a limited time. Contact your Gotham Account Manager for details on any of these services and to arrange a call with our Professional Services staff to help plan an appropriate response to the unexpected.
